DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, and 50-56, drawn to a drainage device and a method of using the device comprising a valve, an intake conduit, and a linear member, classified in class 604, subclass 9.
 - II. Claims 12-16, drawn to an implant device with a flange, tubular shaft, and barbs, classified in class 604, subclass 8.
 - III. Claims 17-49 and 57-60, drawn to a method and implantable device comprising an intake conduit and a flow controller and a method of controlling flow, classified in class 604, subclass 9.
 - IV. Claims 61-68, drawn to a drainage device with an intake conduit, external plate, and flow resistor, classified in class 604, subclass 9.
 - V. Claims 69-75, drawn to a flow resistor with a barb, classified in class 604, subclass 30.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group III and Groups I, II, IV, and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the

combination lacks the claimed structural limitations of the subcombinations, such as the linear member of Group I, the flange, tubular shaft, and barbs of Group II, the external plate of Group IV, and the barb of Group V. The subcombinations each have separate utility as flow-controlled drainage devices that use different components to stabilize the conduit and control flow.

3. Inventions in Groups I, II, IV, and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each invention has separate utility as a flow-controlled drainage device that use different components to stabilize the conduit and control flow. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
